SRT™ BARN SOLUTIONS

CONSERVE SPACE STYLISHLY WITHOUT COMPROMISE.

PC350 SRT™ Barn Door Solutions create a fresh and complete look that is truly a space saver. One of the biggest advantages to using SRT Barn Door Solutions in corporate offices is that they are a brilliant way to conserve space, allowing for ultimate flexibility of having a sliding function of a door, without the typical glass sidelight. SRT™ Barn Door Solutions are uniquely different from our SRT™ Sliding Solutions by virtue of installation. The SRT™ Barn Door mounting system can easily be face mounted to a variety of surfaces, offering flexibility in spaces with limited walk through areas.

SRT™ Barn Door Solutions offer a trackless door that can accommodate single and double door configurations and can easily pair with standard, custom and oversized doors with a sleek and modern design that defines space while offering privacy. Every configuration is created to compliment your space and footprint with a family of products that allow for true customization and adjustability. Our profiles harmonize effortlessly with conventional construction, integrating easily into your workspace and is simple to install while offering durability and flexibility, while focusing on unparalleled lead times.

Each unit is equipped with a SRT™, “Slide Right Technology” mechanism, suitable for various weights and sizes of doors easily integrating with your space and design. This elegant SOFT CLOSE AND OPEN feature is not only sophisticated, it is a benefit that ensures that the door always closes and opens properly. It provides longevity of the design, less stress on the door, reduced maintenance and avoids unnecessary impact.

SRT™ Barn Solutions offer framing profiles that are cut on site from common lengths and are often readily available, providing optimal responsiveness in the event that any on – site discrepancies or quick design changes occur. Varied building conditions are no challenge and quick adjustments speak to the ease of integration, allowing the flexibility to easily wrap around unfinished wall conditions. No need for pre-finished openings, thereby eliminating costly damages to the wall. Nonetheless, flush mount is always another option. Choose from a wide variety of compatible hardware options and design, simplifying the specification process.

SIZING

- Ceiling heights from 82" to 108"
- Base and ceiling frame
- 1 3/4" frame & trim
